

NIM Competence Center for Digital Healthcare GmbH

Type of organization

AI, Big data application/ digital health solution supplier

Headquarters (country)

Germany

Maturity Level

In development

Organization description

Founded in 2017, we are a Berlin based Health-Tech Company. We are a multidisciplinary team composed of mathematicians, physicists, engineers, software designers and business developers.

Solution/service description

We developed and we continuously extend our all-inclusive platform solution with a series of analytic models for functional medical images. Working in close cooperation with neurologist and nuclear medicine clinicians we write quantitative algorithms for the evaluation of cancer therapies, for early diagnosis of neurological and oncological diseases, for prevention.

Features/product description

Our software includes all the features of the common frameworks used nowadays by specialist clinicians dealing with medical images, allowing a visualization of the patients in a user-friendly environment. It naturally adds the radiomics analysis to the platform, visualizing these features which are not identifiable with the doctor's eye.
