EU funded project

Headquarters (country)

Austria

Maturity Level

In development

Organization description

The PlatformUptake.eu project is a Coordination and Support action funded from the European Union's Horizon 2020 research and innovation programme. Over the course of 26 months PlatformUptake.eu seeks to map open platforms in the Active and Healthy Ageing (AHA) domain and carry out an in-depth evaluation of the most representative cases (such as UniversAAL, FIWARE and ActivAGE). The project assesses the hindrance and success factors for their evolution, to finally ensure the large-scale uptake of existing platforms and the development of new ones. Additionally the project proposes the creation of an Online Information Hub which provides support materials on all relevant platforms, the organization of several stakeholder events, as well as a MOOC for promoting synergies, knowledge exchange and a common understanding among all stakeholders in the AHA market.

Needs of your organization

The PlatformUptake.eu project aims to establish a collection of all existing platforms in the AHA domain, including those open-source, semi-open source and privately held. Additionally the project seeks to reach stakeholders, such as technology developers (apps, devices, etc.) not involved with the services of existing open platforms before, and draw their attention to the project awareness raising, and foster collaboration with them.

Interest your organization

The project consortium is interested in engaging with external stakeholders in knowledge sharing, evaluation and promoting the project outcomes and support materials. This includes physical presence at external meetings and gatherings, or participation at online
