Organization description

We are a company focused on digitising, humanising and improving the provision of services and the relationship between patients and healthcare specialists with audiovisual support and through the comprehensive and intensive use of technologies such as blockchain, IoT or BigData for the generation, storage and/or exploitation of data through artificial intelligence and real-time data.

Needs of your organization

We seek funding for the development of applications for the monitoring of elderly and post-operative patients through the use of technologies such as blockchain, IoT or BigData for the generation, storage and/or exploitation of data through artificial intelligence and real-time data.

Interest your organization

Our interests are business development, technological improvement and advancing the digitalisation of healthcare from a medical perspective. With the support of our team we use the latest technological advances to provide digital solutions to problems in the healthcare system from a patient-centred medical perspective.
